1969 CENSUS OF AGRICULTURE

No data from the 1969 Census of Agriculture were available at the time the 1970 estimates of Ohio Farm Income were being prepared. Many of the county estimates in the publication give consideration to projected 1964 Census data, and crop and livestock estimates of the Statistical Reporting Service used in the estimating procedures have not been revised to reflect 1969 Census data. Comparison of cash receipts estimates with the 1969 Census may reveal some differences, particularly in the per farm and per acre averages. Many of these differences are the result of reliance on projections of 1964 data for 1970 estimates, but the user should be aware of significant differences between 1964 and 1969 Census methods and totals. Briefly, the Census shifted from interview to mail survey for most of the 1970 data collection, and Census published totals for 1969 are adjusted to allow for incompleteness which was not done in 1964 or prior Censuses.

1970 CASH RECEIPTS FROM FARMING IN OHIO

Ohio farm income reached a new record high in 1970. Cash receipts from marketings and government payments totaled \$1,413,106,000, up one percent from a year earlier. A decrease of \$14 million in government payments to Ohio farmers was more than offset by an increase of about \$27 million in cash receipts from farm marketings. Payments under the Feed Grain Program were down about \$10 million in Ohio, accounting for most of the drop in government payments. By program, Ohio government payments for 1970 were: Feed Grain Program \$53,666,000; Wheat Program \$24,298,000; Conservation \$4,916,000; Cropland Adjustment \$3,356,000; Sugar Act \$1,713,000; Wool Act \$1,486,000; Soil Bank \$147,000; and Milk Indemnity \$31,000.

Ohio farm marketings during 1970 amounted to \$1,323,493,000. Of the total, livestock and livestock products accounted for 58.0 percent and crops accounted for 42.0 percent. Livestock cash receipts were down only slightly from a year earlier, while income from crops rose nearly seven percent from 1969.

Ohio's two major field crops, soybeans and corn were up 13 percent and eight percent respectively from 1969 cash receipts. Other significant increases included sugar beets, up 38 percent, and vegetable crops, up nine percent. Wheat, hay, oats, and fruit cash receipts were all down from a year earlier, due to smaller crops of most of these commodities.

All major livestock groups were down slightly or unchanged from last year, with the exception of receipts from dairy products which were up three percent from 1969. Cash receipts from cattle and calves were virtually unchanged from a year earlier, while hogs, sheep, and poultry were down three, six and five percent respectively.

Dairy remains the largest single source of cash receipts to Ohio farmers, accounting for 19.3 percent of the State total income from farm marketings. Cattle and calves ranked second with 15.7 percent and hogs were a close third

place with 14.8 percent of the total. Soybeans and corn were the high crops with 13.1 and 11.5 percent of total cash receipts respectively. These five commodities accounted for 74.4 percent or nearly three-fourths of the total cash receipts to Ohio farmers in 1970.

Darke County remained the top county in 1970 with cash receipts of over \$43 million. The next five highest counties - Mercer, Wayne, Fulton, Wood and Putnam - each exceeded \$30 million in cash receipts. Leading counties by commodity were: Wayne in dairy products, Fulton in cattle and calves, Clinton in hogs, Darke in both corn and poultry, Wood in both soybeans and wheat, and Lake in greenhouse and nursery cash receipts.

PROCEDURE

Estimates of cash receipts by county from farm marketings in Ohio were published initially in 1927 and annually since 1929. These county estimates of cash receipts are published by the Department of Agricultural Economics and Rural Sociology of The Ohio State University and the Ohio Agricultural Research and Development Center in cooperation with the Statistical Reporting Service of the U.S. Department of Agriculture. This bulletin contains the 1970 Ohio county cash receipts estimates, and revised 1969 estimates for the State.

Gross and Net Farm Income data are presented in Table III. The information is available only at the State level, but the relative income and expense situation of the Ohio farmer can be observed over a period of years.

Cash Receipts represent gross returns from the actual sale of crops and livestock during the calendar year. The value of home consumption and inter-farm sales are not included as cash receipts. Production expenses such as feed, fuel, fertilizer, and purchases of feeder animals are not subtracted from cash receipts. The addition of government payments to cash receipts provides a measure of gross cash income, or total cash receipts from farming.

Current cash receipts estimates for Ohio and other states appear in the USDA's Farm Income Situation--218--Supplement, August, 1971. These estimates are prepared by the Economic Research Service of the U.S. Department of Agriculture from basic data provided by the Statistical Reporting Service, the 1964 Census of Agriculture, and other sources. The State estimates published in this bulletin may differ from previously published estimates due to revisions in marketings, inshipments, inventory numbers, etc., as more complete information becomes available.

Data from milk market administrators provided a basis for allocating receipts of milk from producers at plants operating under the Federal Order to counties. Data from the Animal Health Division of the Agricultural Research Service provided information on the location by county of producers selling milk to dairy plants. The number of producers in each county was used as a basis of breaking down total receipts at plants not under Federal Order to counties. This assumes annual deliveries per producer to each plant would not differ significantly at the county level. Each grade of milk was considered separately in arriving at the county total cash receipts.

As in recent bulletins, the sale of dairy cows and veal calves has been included with the sale of cattle and calves. Poultry cash receipts include income from the sale of eggs, farm chickens, broilers, and turkeys during 1970. Because of the confidential nature of the data, cash receipts from turkey eggs and other poultry are included as other livestock. Included with sheep cash receipts are returns from wool sales as well as income from sale of sheep and lambs.

The commodity group called "Horticulture Specialties" last year was changed back by the Economic Research Service to "Greenhouse and Nursery" this year. Cash receipts from the sale of greenhouse vegetables are included with vegetable cash receipts, and not with greenhouse and nursery. The county vegetable estimates are a combination of field grown vegetables and vegetables grown under glass. For purposes of ranking, potatoes were considered as separate from vegetable cash receipts. Cash receipts from fruit crops are made up of returns from small fruits as well as from tree fruits and nuts.

Two important factors influencing any comparison by counties are the size of the counties and the major source of cash receipts in each county. Table VI presents the average cash receipts per farm and per acre by county. These averages aid in the comparison of counties with similar farming practices better than a comparison of the total cash receipts. The average per farm and per acre is based on the 1964 U.S. Census of Agriculture "number of farms" and acres of "all land in farms" projected to 1970 levels. (The 1969 Census was not yet available when this publication was prepared.) In some counties the average per acre cash receipts are relatively low because the Census designated acres of "all land in farms" includes a considerable amount of land not cultivated and some not even used for pasture. The 1964 Census defined a farm as any tract operated as a unit of 10 or more acres, if the estimated sales of agricultural products for the year amounted, or normally would amount, to at least \$50; or if less than 10 acres, had sales of agricultural products totaling \$250 or more.

County estimates of cash receipts do not include the value of commodities used on farms. For example, producers may market grain and hay in the form of beef or milk rather than in its original form. By counties the relative importance of some commodities would be different if the value of these commodities used on farms where produced were computed. Figured on a season average price basis for each commodity, the value of selected crops used on farms where produced in 1970 would amount to \$182 million for corn, \$61 million for hay and \$14 million for oats.

This bulletin has been prepared through the efforts of many people. Included are personnel of the Ohio Agricultural Stabilization and Conservation Service, Federal Milk Market Orders operating in Ohio, the Ohio Department of Agriculture, the Ohio Agricultural Research and Development Center and the Agricultural Research Service. Special recognition is due the professional and clerical work done by the staff of the Ohio office of the Statistical Reporting Service, particularly Miss Shirley Zonner. However, the greatest recognition is due to the large number of Ohio farmers and agri-businessmen for their interest and help in providing the basic data used in compiling the information for this bulletin.

TABLE I

CASH RECEIPTS FROM FARM MARKETINGS AND GOVERNMENT PAYMENTS, OHIO, 1930-1970

Year	Farm Marketings				Total Cash Receipts and Government Payments	Percent of All Commodities	
	Livestock and Livestock Products	Crops	Total Livestock and Crops	Government Payments		Livestock and Livestock Products	Crops
